

Medical Transcription Wyoming | Challenges in Radiology Transcription and their Solutions

Posted on *March 08,2017* by *Numina Transcription*

Required to be produced in accurate and meaningful manner, radiology transcripts are expected to be presented in different formats, but primarily based on what the radiologist prefers – the objective is providing precise report in supporting documentation that eases the work of practitioners

Fundamentals of Radiology Transcription Having been entrusted with pinpointing the patients' medical conditions and diseases perfectly, radiology is one crucial branch in health care that needs all reports to be documented not only verbatim but also with relevance and ability to support physicians and surgeons. Radiology reports are vital in patients' medical history as they play an important role in the patients' future treatment. Moreover, these reports are vital for legal purposes and insurance claims. **Imaging Technology used for Diagnosis of Patients' Medical Conditions**

- X-Rays
- Ultrasound scan
- CT Scan
- MRI

What it takes to become an efficient radiology transcriptionist To be able to become a professional radiology transcriptionist, one needs to have fair knowledge about using computers, listening skill, and ability to type fast. Passion toward researching and understanding medical information and capability to present error-free transcripts are required. Radiology transcripts must assist medical professionals to arrive at perfect decision in patient condition diagnosis, treatment, and other procedures. The radiology transcriptionist has to provide the following detailed information in diagnostic reports:

- Background of the case
- Methods used for diagnosis
- Description about imaging technologies used
- Views about the process and observation
- Overall finding and suggestions

Radiology Transcription Challenges and their solutions Considerable advancement has occurred in the medical transcription field. Dictation and transcription equipments have changed; data digitalization has revolutionized medical records management through Electronic Medical Records. Web-based access from anywhere and at any time has enabled radiologists to operate from geographically different location by using Tele-radiology. The rise in demand from medical practices and physicians toward medical imaging has resulted in producing a lot of pressure on the radiology practices – they are expected to provide high-quality and accurate reports in the form of transcripts. Efficient support solutions in the form of radiology transcripts are demanded at the shortest TAT possible. Partnering with an experienced transcription service provider that is reliable and qualified caters to the radiology transcription needs of practices and radiologists. Equipped with trained and educated professionals who are familiar with different Radiology Information Systems and Picture Archiving and Communication Systems, radiology transcription companies will be able to resolve the transcription issues efficiently. **The Numinatrans Advantage** The transcriptionists at Numinatrans are qualified and trained. They are familiar with several medical practice software that are needed for effective documentation of radiology reports. With passion toward listening and typing, they are capable of working under pressure to meet deadlines.

Radiology transcription must be error-free and precise; it needs to pinpoint the medical conditions of the patient perfectly while making helpful suggestions. Radiology reports must be documented accurately into transcripts that not only identify the patients' medical issues but also serve as reference and base for future treatment.
